detail how software products are developed up to completion

Languages

- English, Swahili

Profile

I have a strong understanding of HTML, CSS and ES6 JavaScript, and I have utilized the Vue.js framework to build responsive and dynamic websites as you will see on my GitHub linked above. I also have experience integrating with APIs that I build using Node.js to implement features such as authentication and real time data updates. I am eager to bring my skills to your team and contribute to your success as a company. I will be looking forward to your response.
